

E outline my name is Vitaly, I live in Russia in Rostov-on-don, I have a few ideas, I think you just heard!

1 idea there is a proposal to make mining farm on the periphery by lowering the cost of electricity, not to stoop to the level of the outlet, bitcoin is becoming more popular. but I think that this idea is not new, and you heard about it.

2 the idea to explain briefly, we created a group in the traffic police first, they invited their friends and now there is not enough space for the invitation. This is a group created to alert the driver of traffic police in a particular area. Naturally, wanting to join were many, but no place.

If you create an application for Android and Agios switching regions and the County in reference to the example of GPS, users will warn about employees on the road. I think he will use among drivers. Maybe you have any ideas for the class of business in Russia, I would along with you will implement these ideas because they desperately need the money and I will do everything.

If you are interested in these ideas please contact me!
