

# Revenue.

Revenue will be generated in three ways.

## 1. Subscriptions of the product.

Every customer will have to pay USD xx per month of the use of Spread Sheet.

## 2. Accounting Work.

We are ready to do accounting for the customer. USD XXX will be the fixed charges and depending upon the total income or expenses (whichever is greater) charges will fluctuate.

## 3. Advertising.

Every customer will have to fill the details like what industries business belongs, location, major raw material required for product, whether the raw material is procured locally or imported, Target customers, turnover etc . Based on this data customer will get the advertising. Mostly advertising will be related to the business. Example: Restaurant is using the spreadsheet accounting - it will get advertising for food, vegetable, bread, fish, chicken etc from its local supplier or international supplier deepening upon the need of the business.

Advertising from recruitment company, CPA, local advertising company, Lawyer etc

Advertising will only appear if the owner log in, if we are doing accounting work adverts will not appear.

Flowchart of how the product will work.
