

svper
get real

Social Video Platform Engaging for Real

The social instant video-only app for forming new
real-life relationships in real time

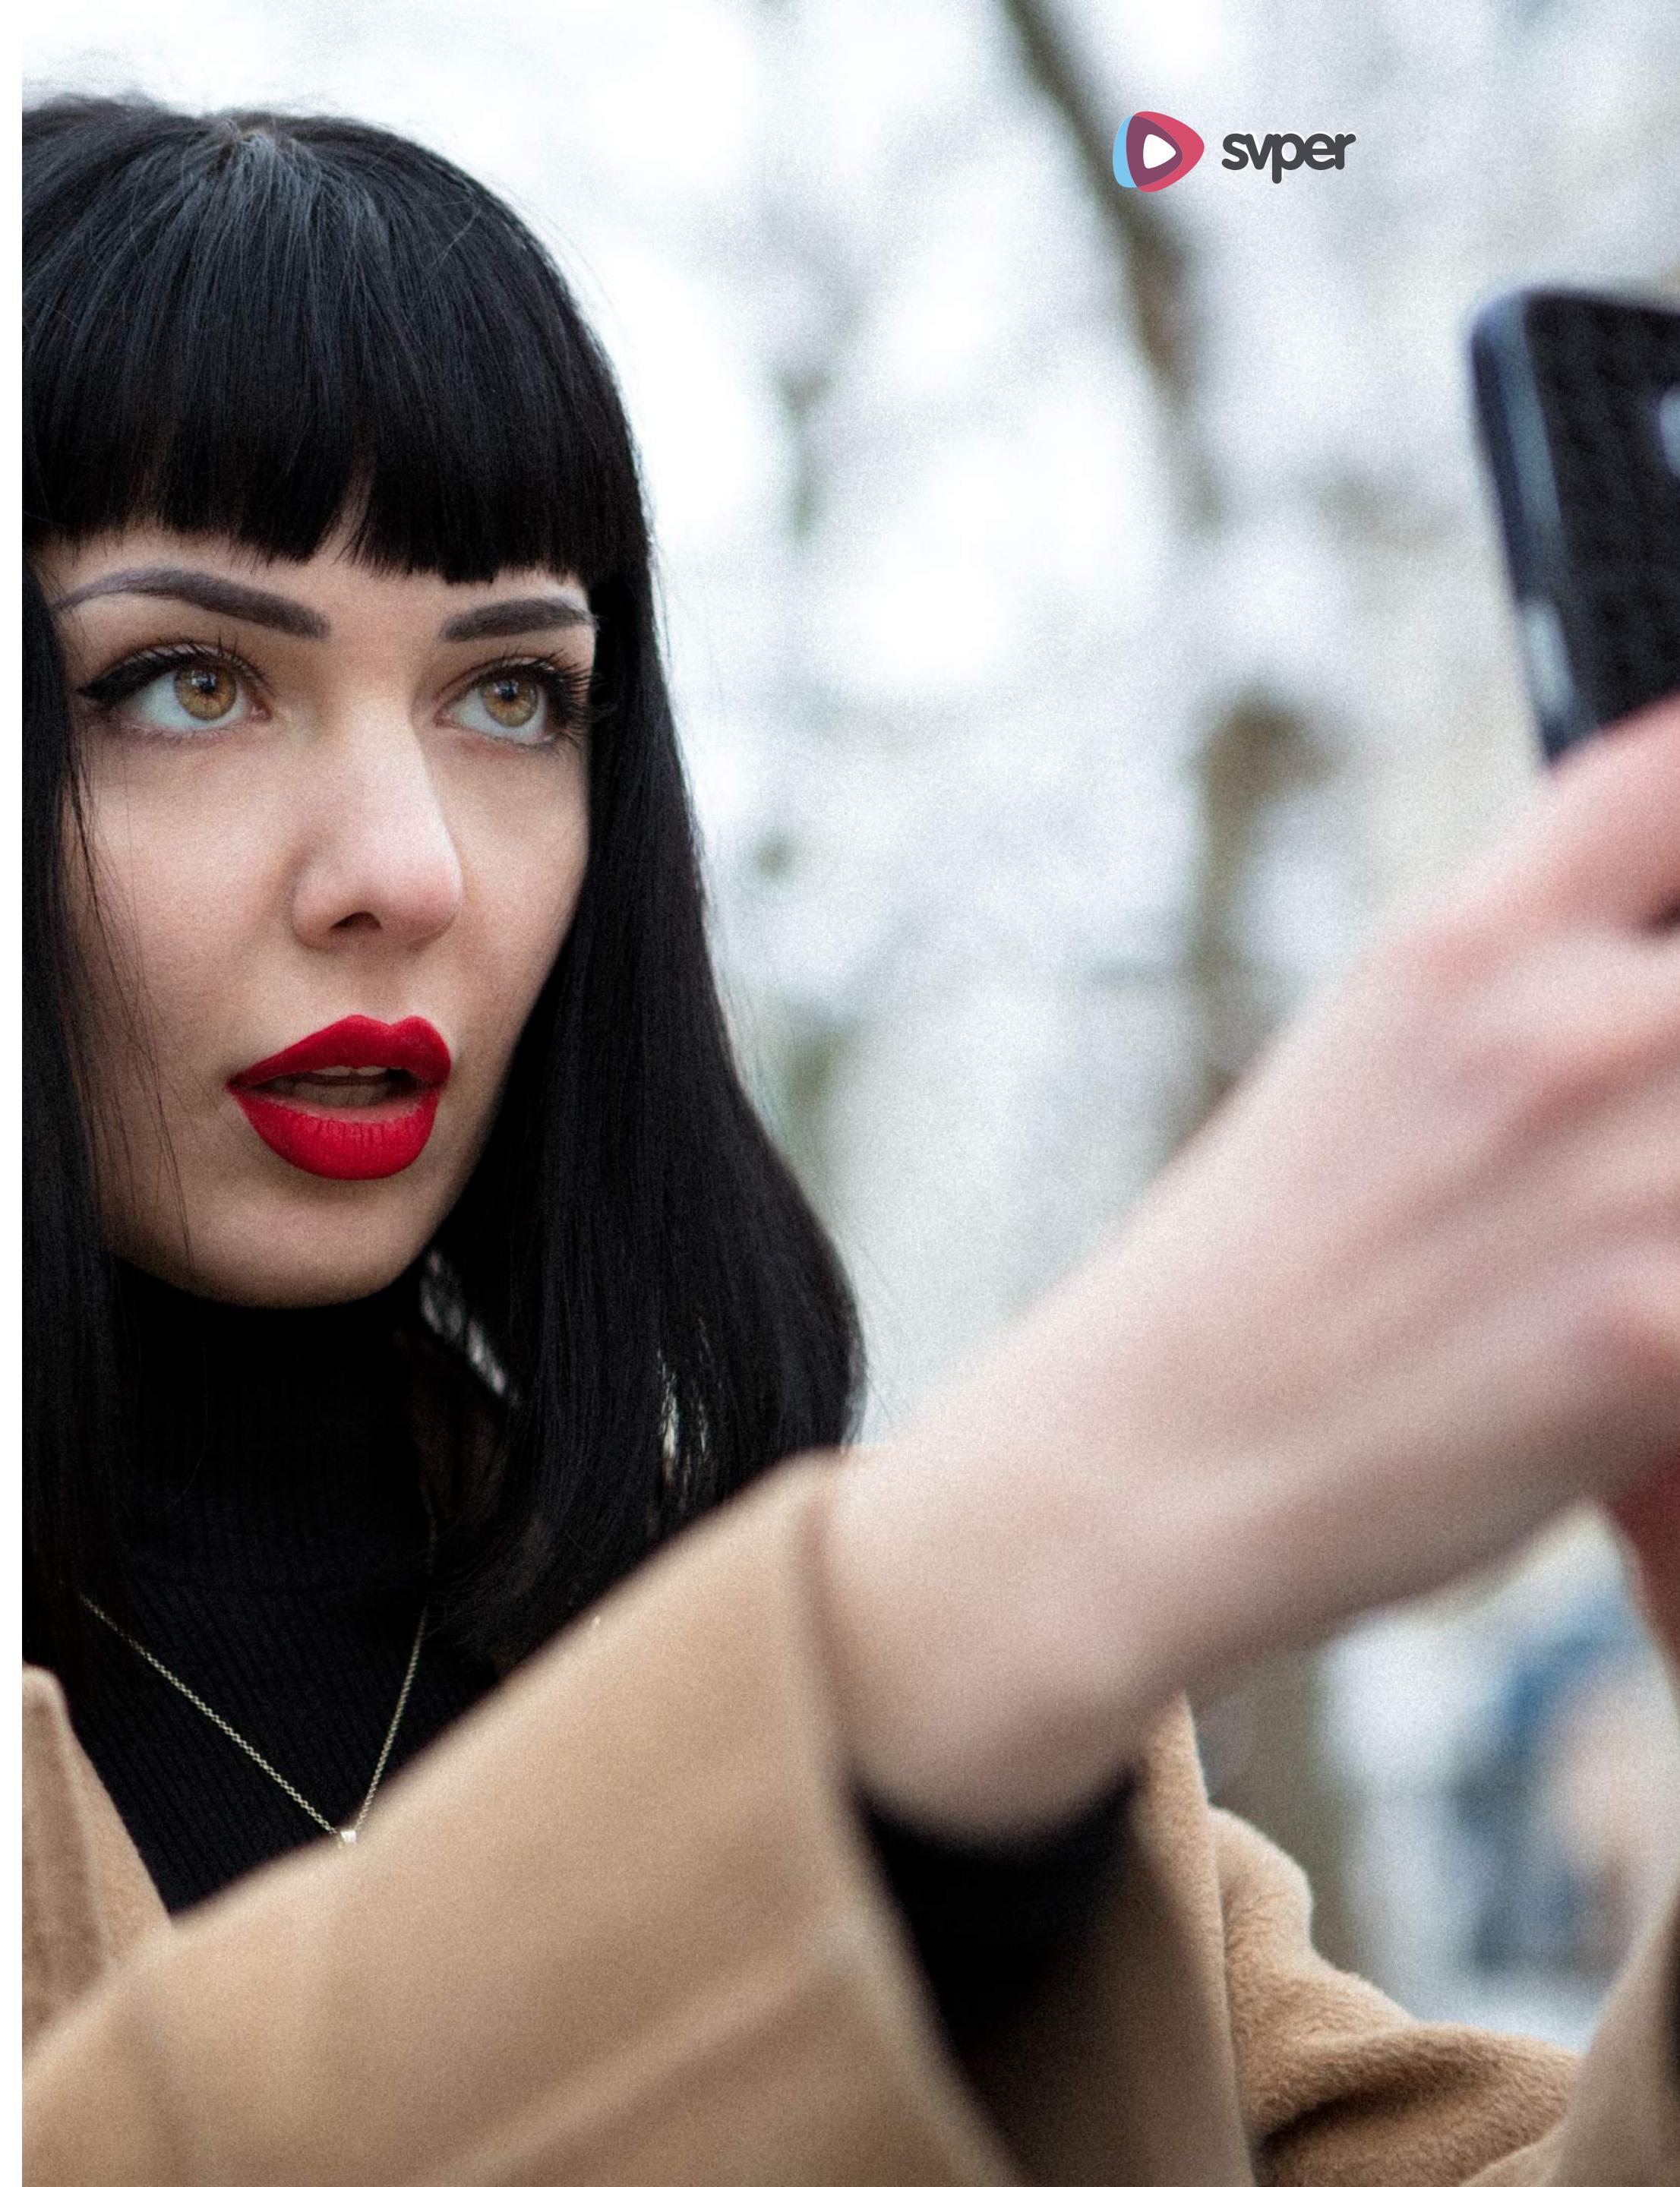

Presenting

**The first APP to integrate blockchain,
instant videos and bring social
connections into the real world**

Social video-only platform allowing real-life meetings with real connections made through secure instant video invitations and responses

Disrupting the social networking and dating app industry

Run by people who have, over a 20 year experience, created more than 100 online dating sites and generated traffic of over 40 million users for them

Problem of meeting new people online

Today, meeting new people is done mainly on dating sites – a system that has become outdated

Wasting time on chatting with fake, inactive, silent profiles and bots

Disappointment in real life because of deceptive profiles descriptions and old profile pictures

Waiting to turn new online connections into real-life relationships

No control over your personal data and weak protection

SVPER vision

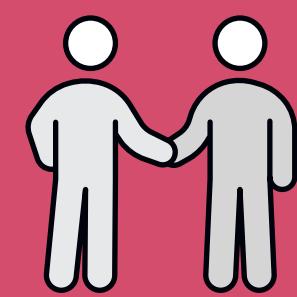

**Connecting real people to real people
in real life**

The innovative concept **replaces user profiles,
pictures and text messages with instant video
invitations**

Users can see what people near them planning
to do, choose the activity they would like to join,
and meet them in person straight away

SVPER solution

**Building the next generation social way
of meeting new people**

Instant

Post a video invitation,
receive video replies

Rewarding

A tokenized economy

100% Real

It eliminates fake profiles and
bots

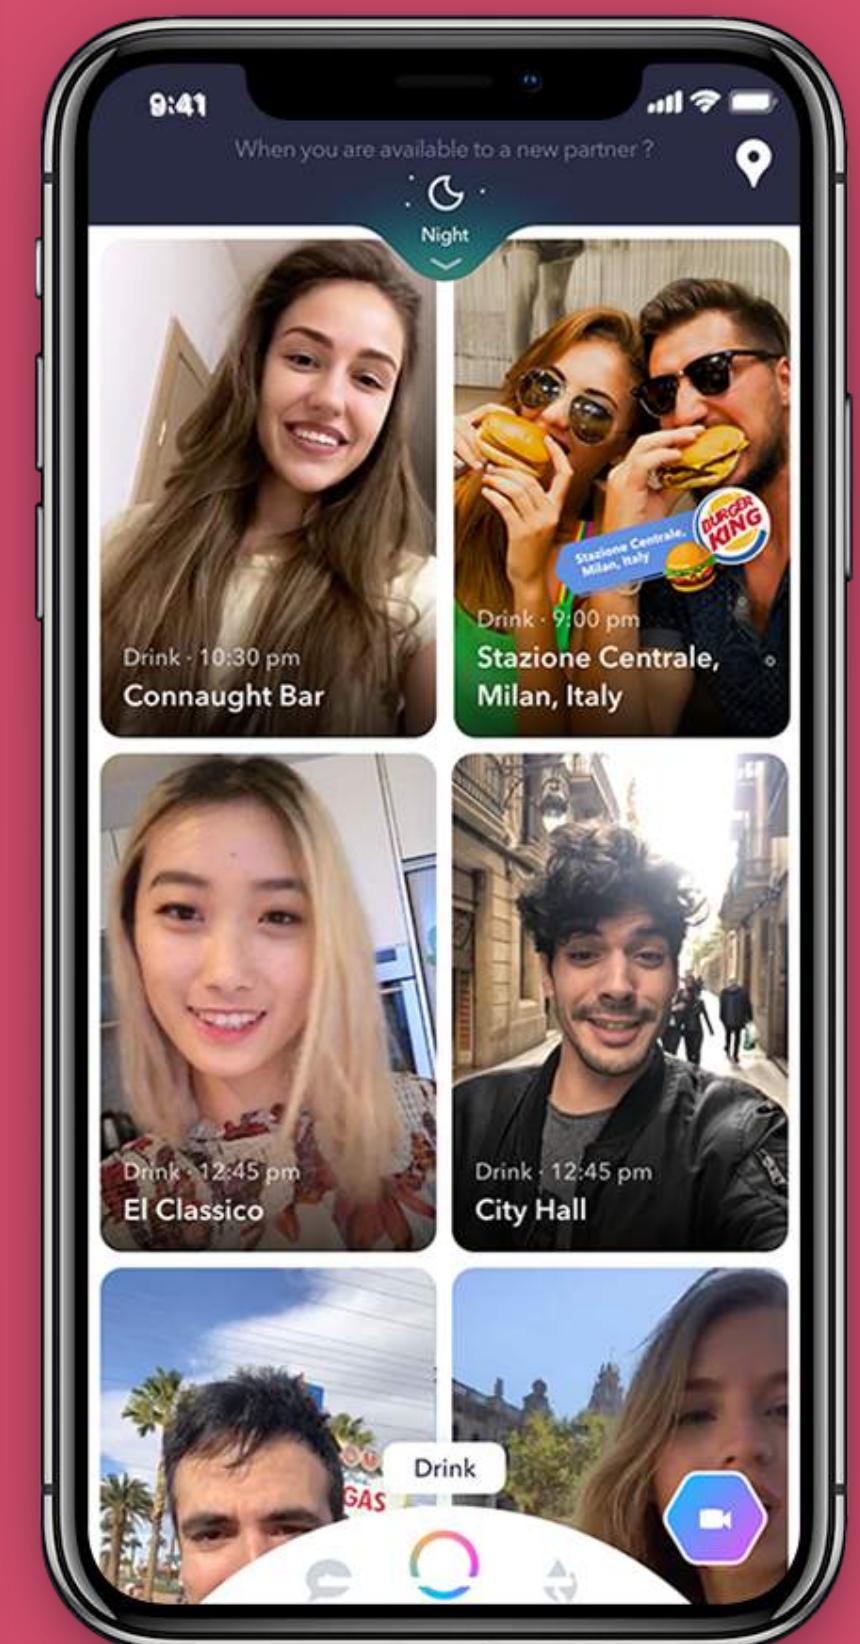

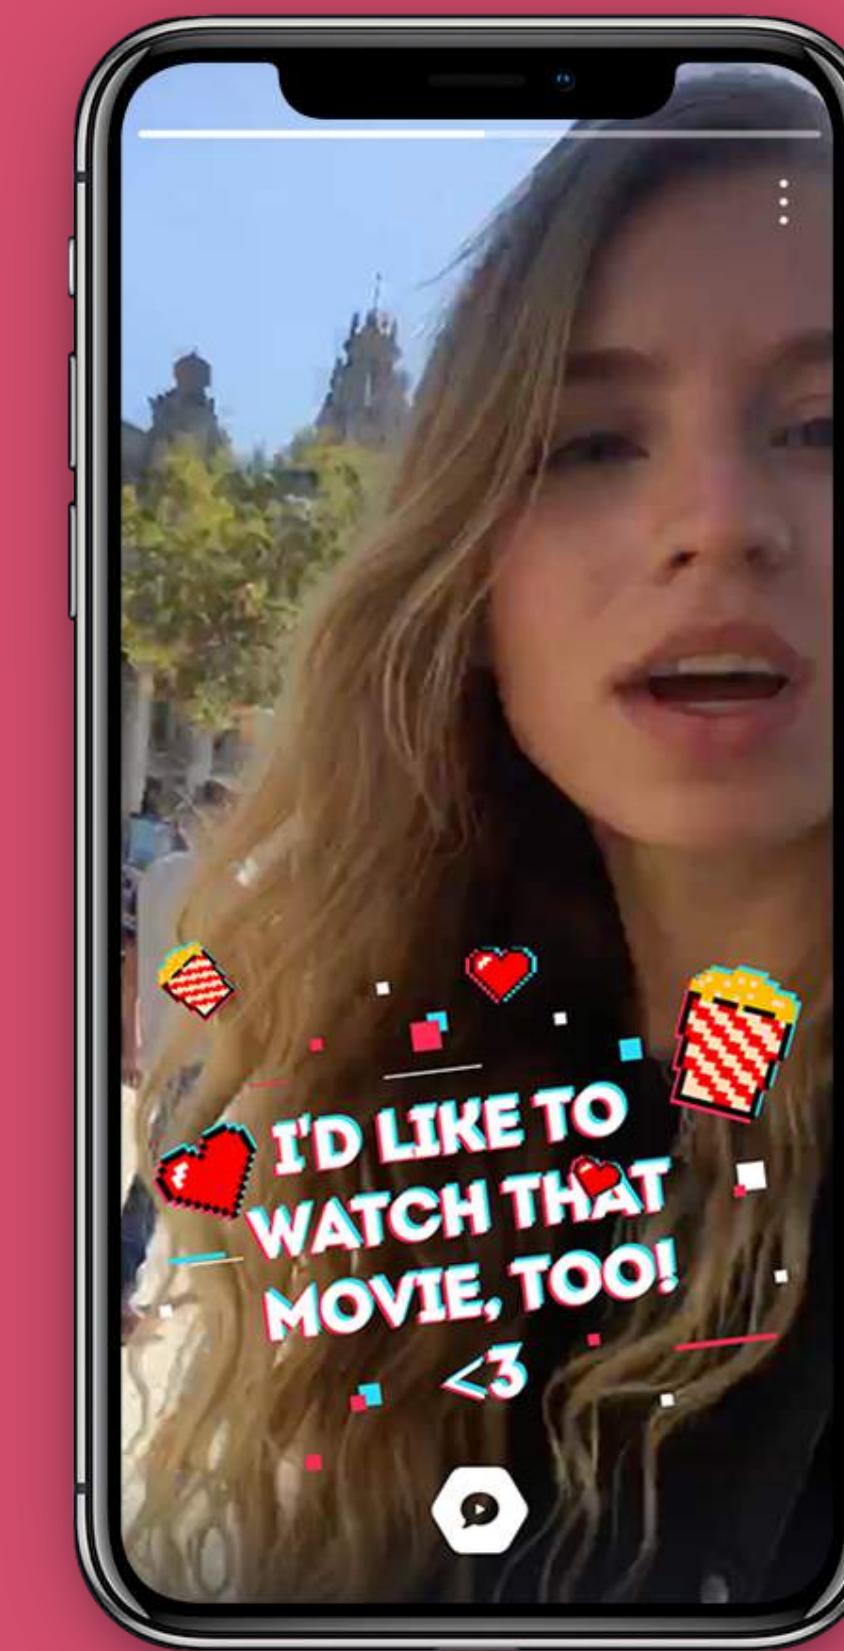

Secure

Leverages the advantages of the
ERC-721 standard in ethereum
blockchain technology to increase the
security, trustworthiness and
transparency within the app

Friendly

Find companionship; from
friendship to romance.

SVPER platform

Integrating blockchain for users and building a tokenised economy

Blockchain

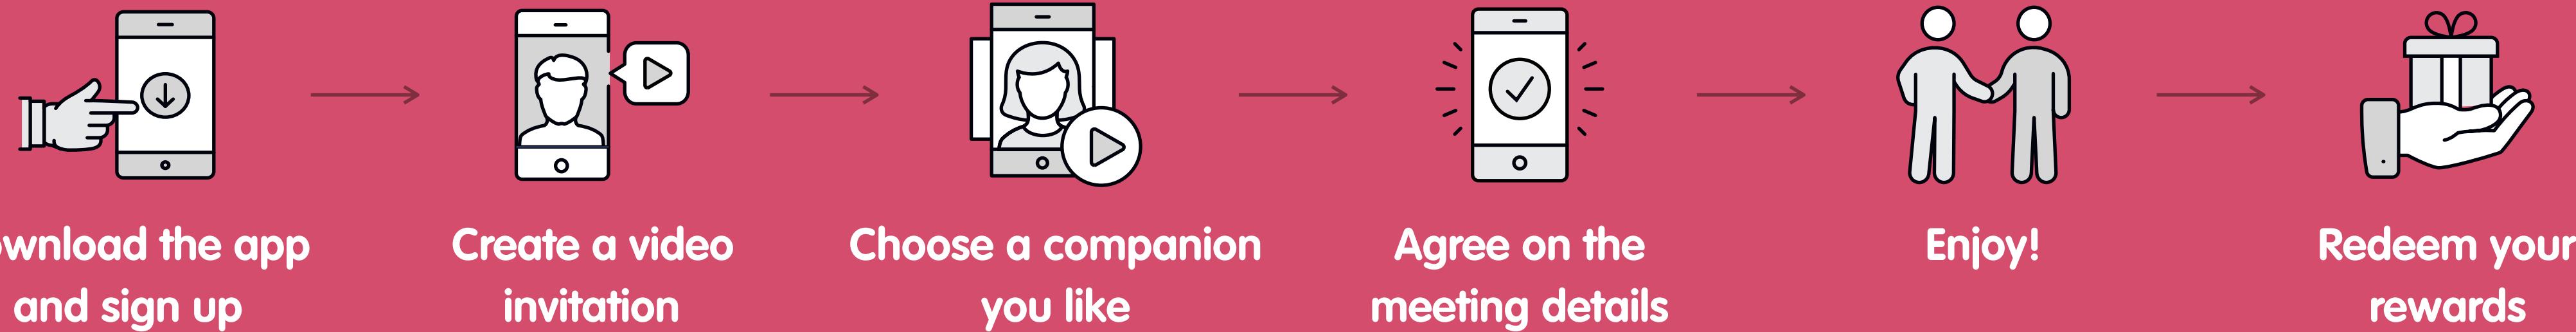

Creating a “Digital DNA” on the blockchain

Easy to use

SVPER enables people to enjoy living in the moment

SVP Token

Svper is the 1st social media that rewards its users with SVP tokens for meeting offline

Digital DNA

Through real-life encounters the app community will validate each other's identity

The ERC-721 non-fungible token standard allows development of a new digital identity standard that we call "Digital DNA".

Digital DNA will be based on a scoring system

Through real-life encounters the app community will validate each other's identities and contribute to each other's Digital DNA

By working together, users improve security and create trustworthiness and transparency within the app.

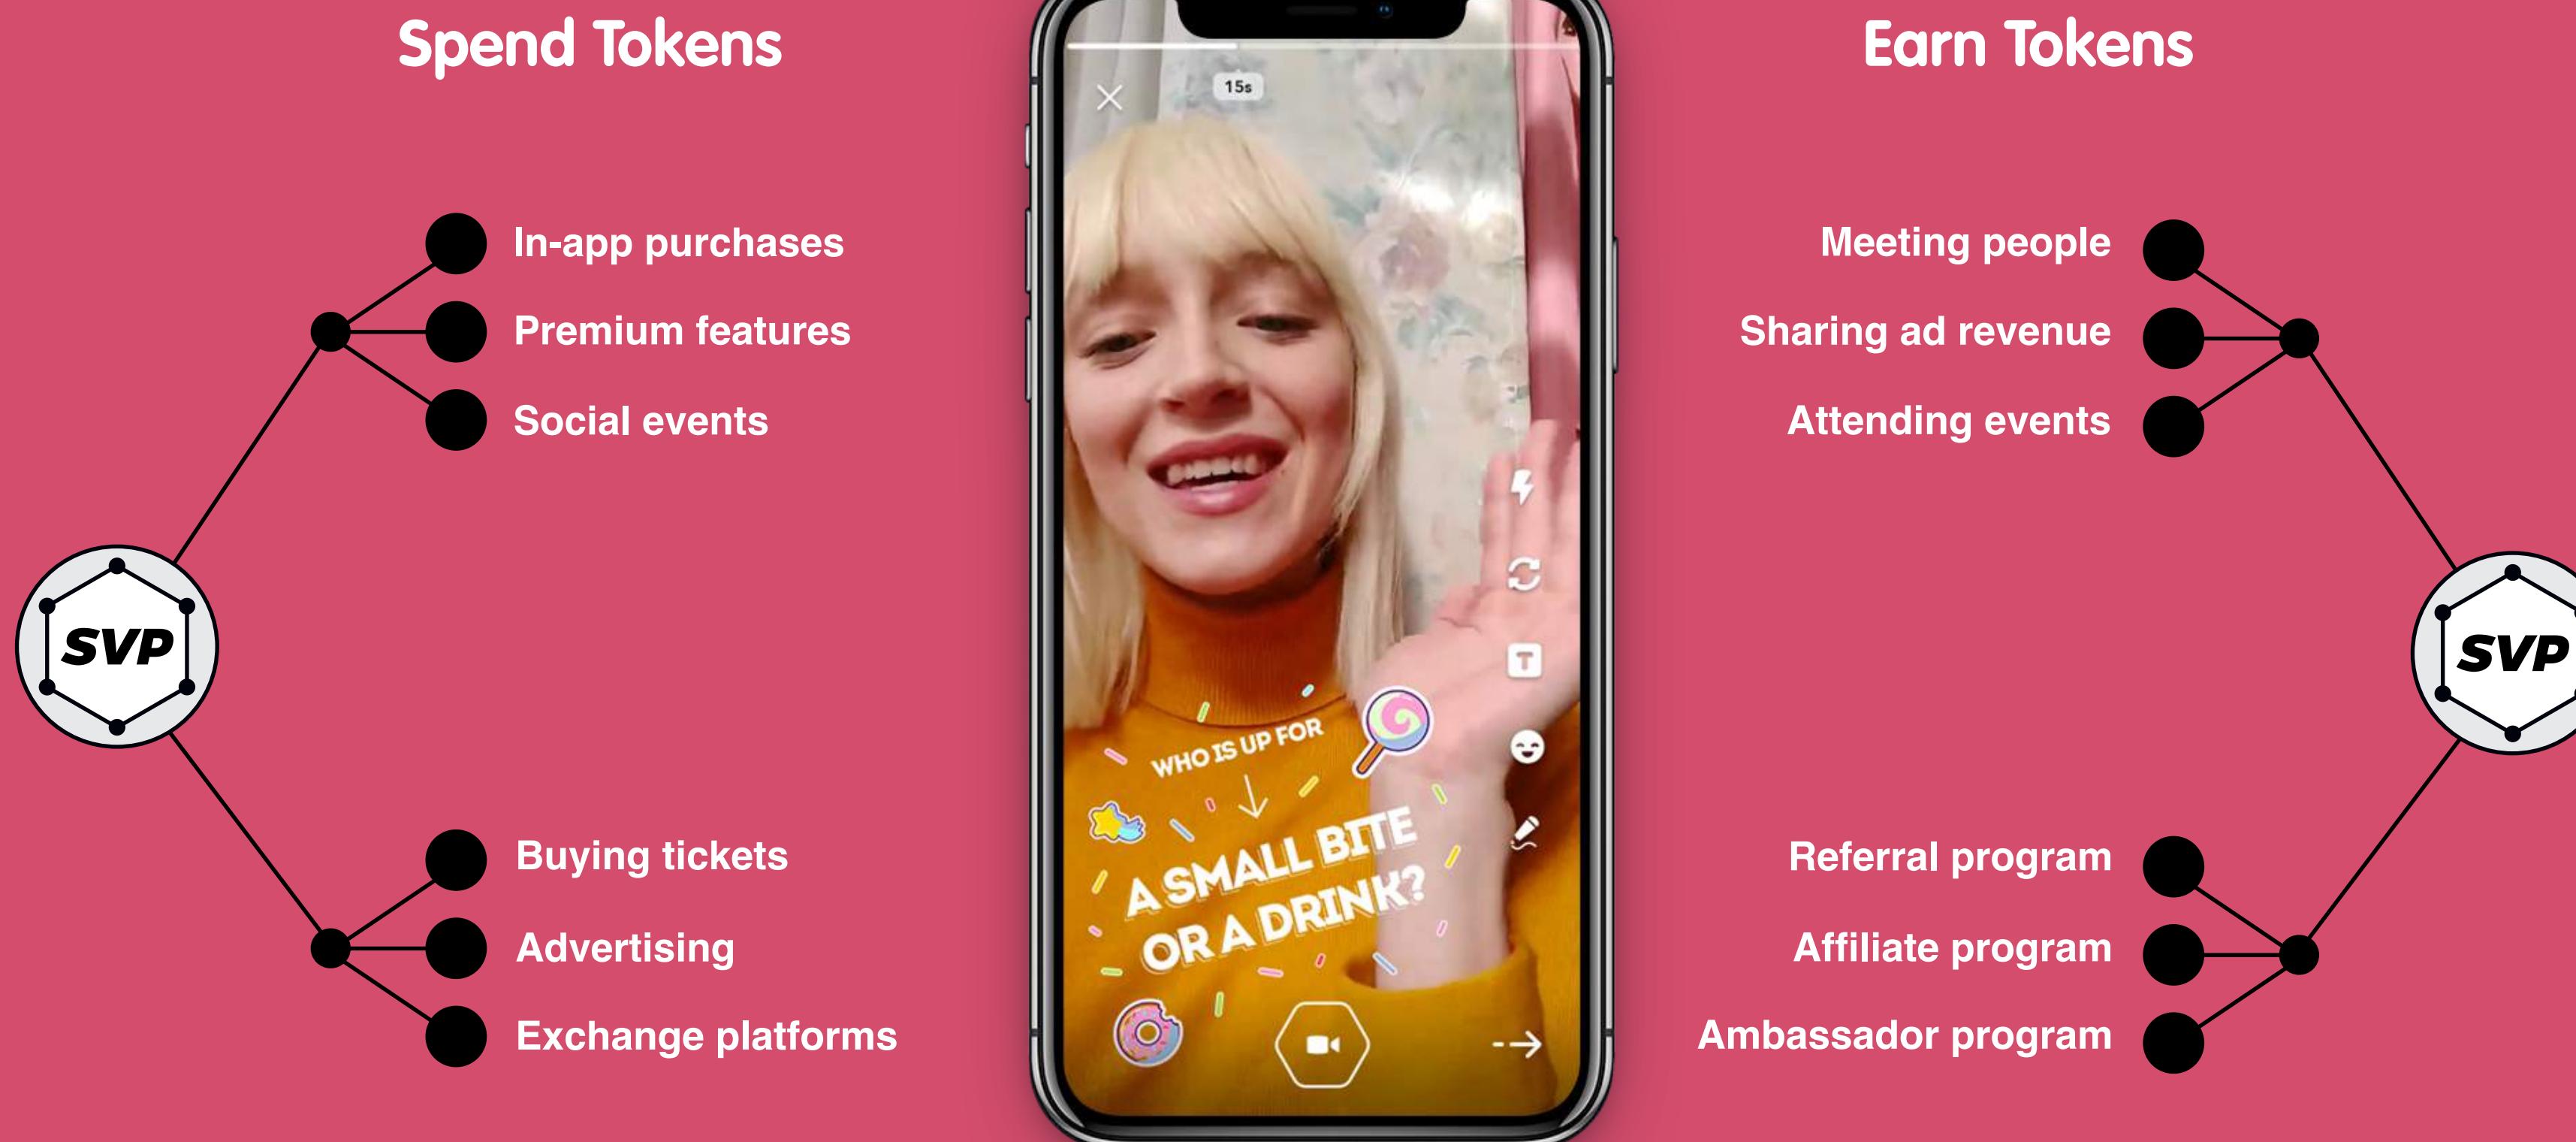

- ✓ Transparency
- ✓ Improved data ownership
- ✓ Enhanced security

- ✓ Proof of existence
- ✓ Introduce trust and reality
- ✓ Real life encounters to create consensus

SVPER Building a Token Economy

The SVP Token will have multiple functions within the ecosystem

Token utility

Tokenized economy of SVPER designed to ensure constant turnover of SVPER tokens from platform to user and vice-versa

The SVP Token based on ERC 20 is our own utility token exclusively used and accepted within the SVPER app to grant access to all its features

SVP is designed to remunerate our users worldwide based on their usage and promotional activities

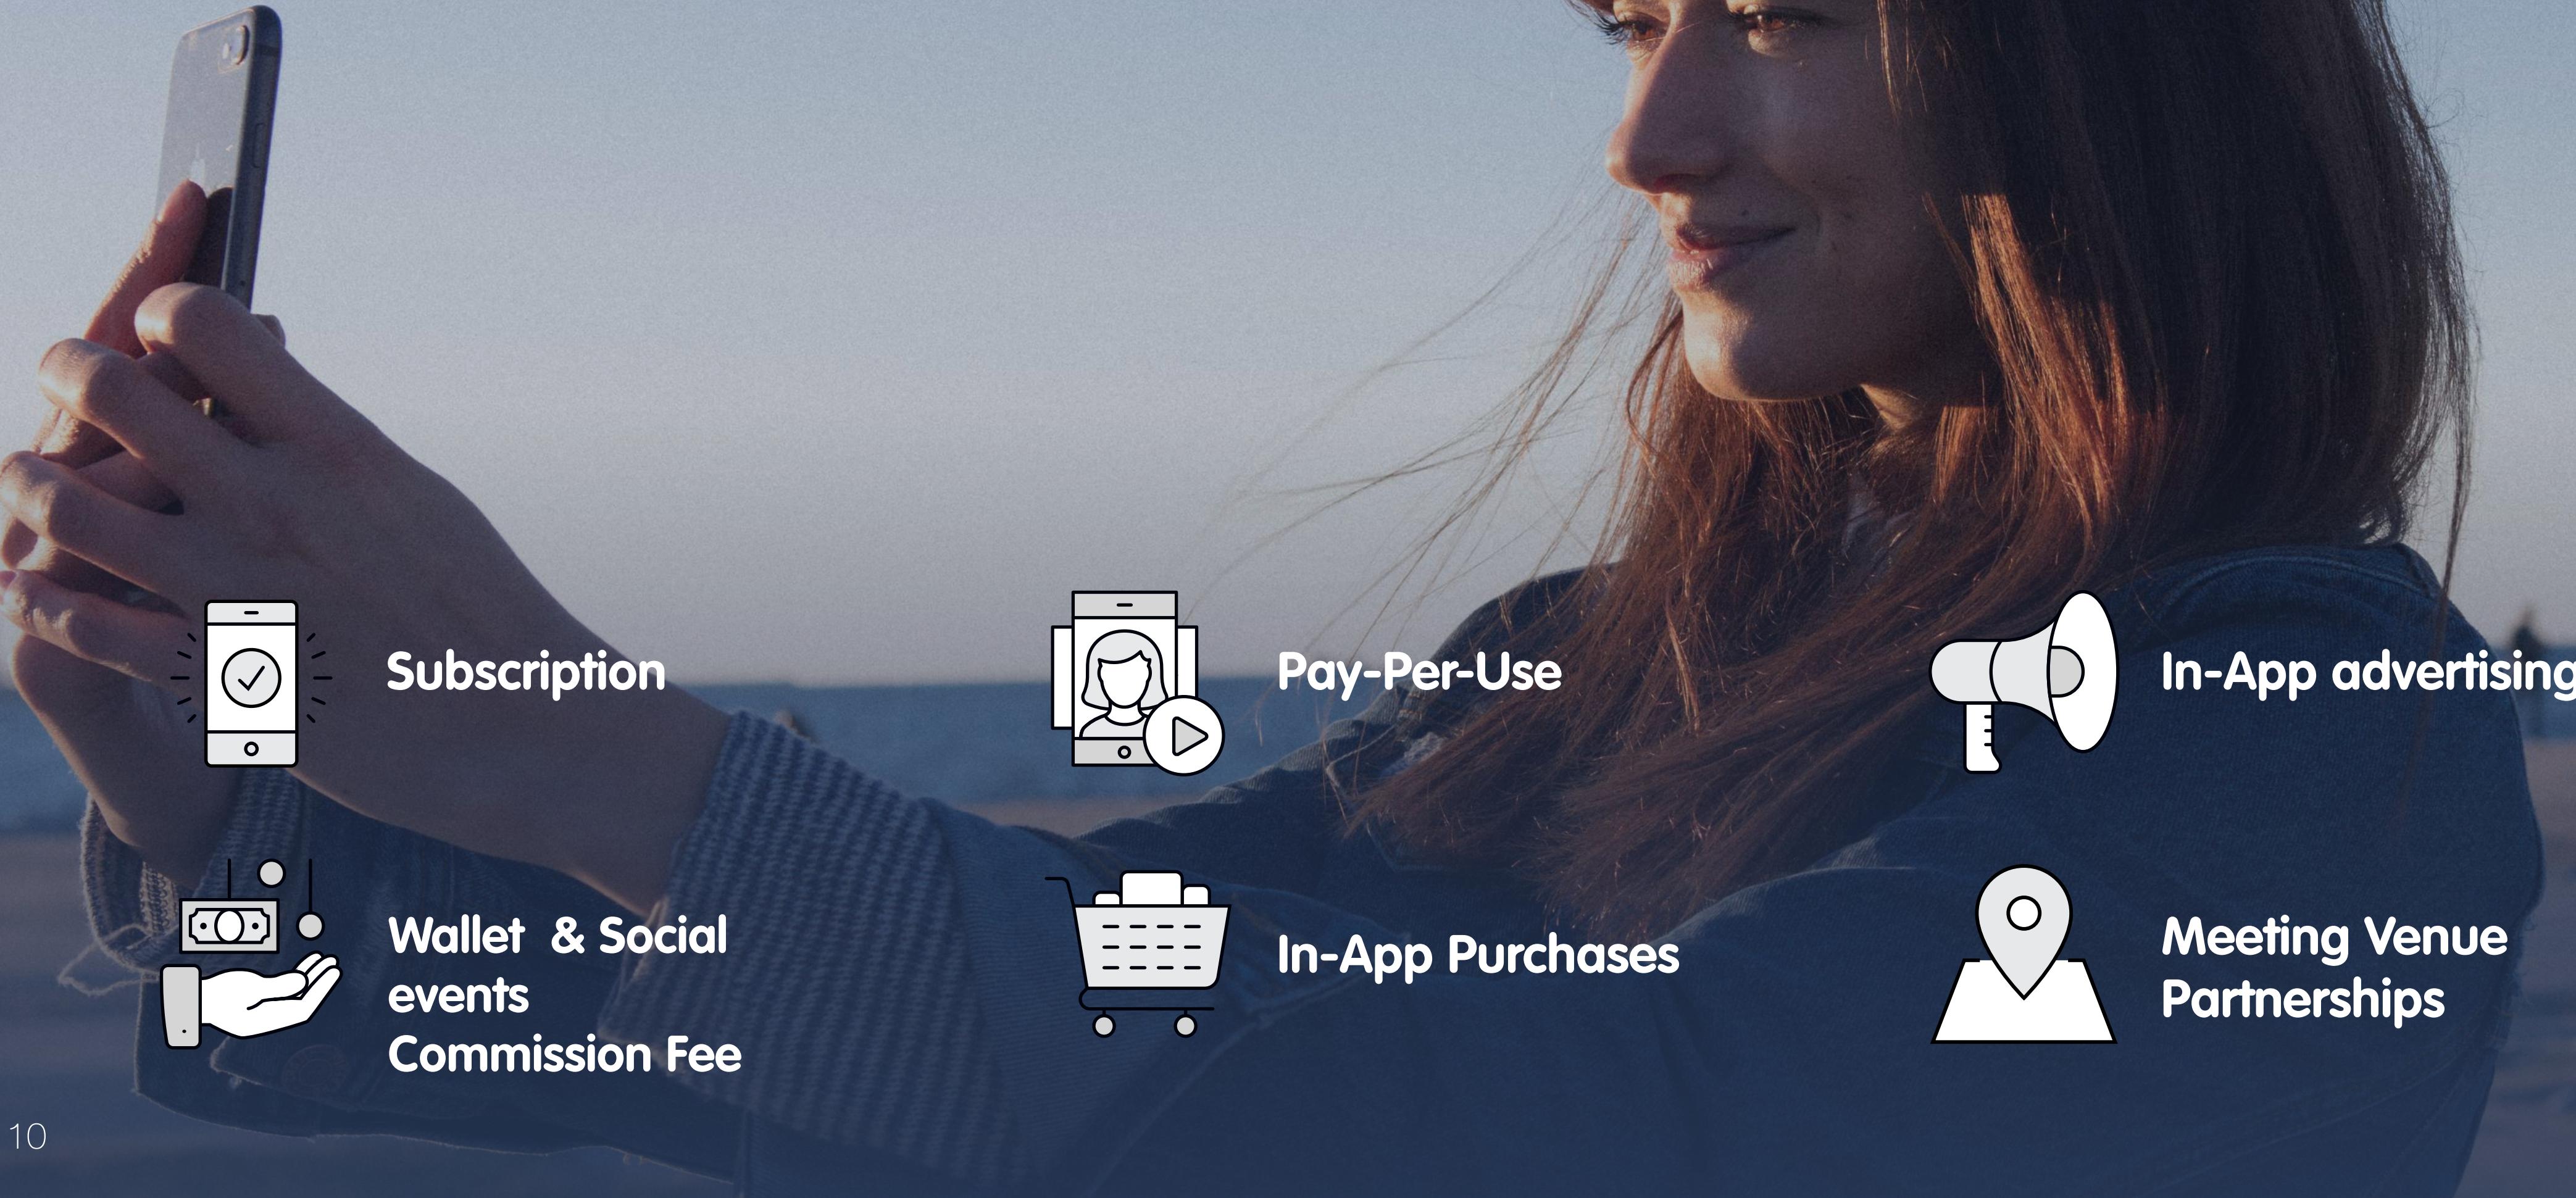

Projected growth rate is based on the network effect driver: as SVPER develops as a social network, token usage will grow, hence users will want to hold their tokens in order to maximise the benefits of the growing user base

Burning mechanism: the equivalent of funds raised during the Token Sale will be burnt over the course of the coming years as a reward for token holders

Key Revenue Streams

SVPER has a multi-layered business model

Potentially high userbase

Potential to roll out to tens of millions of people

Founders and leadership team

Leveraging huge expertise built up in the online dating industry

Jean-Baptiste Fort

SVPER was founded by René Carrillo and Jean-Baptiste Fort, who have over 20 years of combined experience in digital technology, e-marketing, and social media.

Together they are managing Niatran Invest Holding, which owns almost 100 online white label dating platforms, both websites and mobile applications, in several countries
