

Ladies and Gentlemen!

Our small company has developed a solar charger for smartphones. We collected pre-industrial samples. The device is tested, all characteristics are confirmed.

We are looking for an investor to start the device in industrial production and start selling it.

The device was developed in St. Petersburg (Russia). The company itself is opened by us in Estonia. In the same place, we plan to assemble the device.

If you find our device interesting, we are ready to send detailed materials on it and answer all your questions.

Yours faithfully

Technical Director "Soltra"

Dmitry Kapichun
